Volume 51, 1991, Numbers 1–3

CONTENTS

	PAGE
Number1	
Assays for angiogenesis: A review: *R. Auerbach, W. Auerbach and I. Polakowski*	1
Cyclic nucleotide phosphodiesterases: Pharmacology, biochemistry and function: *W. J. Thompson*	13
The inhibition of glutathione *S*-transferases: Mechanisms, toxic consequences and therapeutic benefits: *P. J. van Bladeren and B. van Ommen*	35
Gene expression of nonsegmented negative strand RNA viruses: *A. K. Banerjee, S. Barik and B. P. De*	47
Protein kinase C: *S. Stabel and P. J. Parker*	71
Structure and function of inositol trisphosphate receptors: *C. W. Taylor and A. Richardson*	97
The role of glutathione-dependent enzymes in drug resistance: *S. M. Black and C. R. Wolf*	139
Number 2	
Glutathione deficiency produced by inhibition of its synthesis, and its reversal; applications in research and therapy: *A. Meister*	155
Macrophage-derived angiogenesis factors: *C. Sunderkötter, M. Goebeler, K. Schulze-Osthoff, R. Bhardwaj and C. Sorg*	195
The biochemistry of compounds with anti-microtubule activity in plant cells: *L. C. Morejohn and D. E. Fosket*	217
Rhythms in second messenger mechanisms: *K. Witte and B. Lemmer*	231
The biochemical pharmacology of nogalamycin and its derivatives: *L. H. Li and W. C. Krueger*	239
Interactions of the catharanthus (vinca) alkaloids with tubulin and microtubules: *R. H. Himes*	257
The cardiovascular system and daily variation in response to antihypertensive and antianginal drugs: Recent advances: *B. Lemmer*	269
Drug metabolism in carcinogenesis and cancer chemotherapy: *M. A. Graham, R. J. Riley and D. J. Kerr*	275
Number 3	
Significance and measurement of DNA double strand breaks in mammalian cells: *M. C. Elia, J. G. DeLuca and M. O. Bradley*	291
Unique features of the trophoblast interferons: *R. M. Roberts, J. C. Cross and D. W. Leaman*	329
Drug glucuronidation in humans: *J. O. Miners and P. I. Mackenzie*	347
Embryonic angiogenesis factors: *W. Risau*	371
Interactions of colchicine with tubulin: *S. B. Hastie*	377
Structure and function of G proteins: *J. Olate and J. E. Allende*	403
Rhythms in neurotransmitter turnover: Focus on the serotonergic system: *K. F. Martin*	421
